About Me

Senior Full-Stack Engineer (6 years): Specializing in **Java/Spring Boot**, **React/Next.js**, and **AWS**, with experience across diverse domains and 30+ projects

Full-Stack Mastery: Build end-to-end products from API and data modeling to optimized UIs

Architectural Thinking: Designed scalable monolithic and microservices systems with secure architectures, resilient failure handling, and maintainable code

Cloud & Delivery: Deploy and operate production workloads on AWS with CI/CD and consistent environments

Business Translation & Collaboration: Translate requirements into solutions and collaborate effectively across teams

Fast Learner & Problem Solver: Quickly learn new technologies, solve complex problems pragmatically, and continuously improve solutions

Primary Skills

Back-end: Java, Spring Boot, SQL (MySQL, Postgres), OLTP, system/database design, microservices, Redis, ELK, Kafka

Front-end: React, Next.js, SPA/SSR, SEO & performance, real-time (WebSocket/WebRTC/SSE), React Query, Tailwind, Zustand

DevOps / Cloud: AWS (EC2, ALB, ASG, RDS, S3, CloudFront), CI/CD (GitHub Actions), Terraform, Docker

Secondary Skills

Back-end: Node.js, Python, NoSQL (MongoDB, DynamoDB), GraphQL, gRPC, reactive programming

Front-end: Flutter, React Native, Android, Electron, Tauri (Rust), 3D (Babylon.js, Three.js), jQuery

DevOps / Cloud: GCP, Kubernetes, AWS (ECS, Athena)

Extra: Third-party integrations (payments, social login), real-time sync & recovery, transactional workflows, hardware integrations (printers/POS), embedded firmware

Education and Certifications

Bach Khoa TPHCM (HCMUT), Electronics and Telecommunication Engineering

Sept 2016 – Nov 2020

Amazon Web Services (AWS), Certified Solutions Architect – Associate

Jan 2026 – present

Experience

Senior Full-Stack Developer, Blue Dragon Communications (Korean IT Outsourcing)

Mar 2024 – present

- Leading development of multiple projects in Spring Boot and React/Next.js
- Driving architectural decisions and implementation across the stack (Spring Boot, React/Next.js, data workflows, etc.)
- Designing and implementing scalable, maintainable systems with clean abstractions and well-structured monoliths/microservices.
- Deploying and operating production workloads on AWS with CI/CD and environment-consistent configuration.
- Maintain legacy systems and deliver quick fixes and improvements as needed.
- Translating requirements into practical solutions and collaborating effectively across Dev/QA/BA/PM.

Part-time Freelance Software Developer, UpWork

Apr 2022 – present

- Delivered multiple projects for clients in Hong Kong, India, and France
- Including web and mobile apps, legacy system maintenance, consulting, and rapid prototyping
- Worked with Flutter, Node.js, Python, and PHP.

Full-Stack Developer, HuyLinhTech + MaiLinhTech (Startup)

July 2019 – Feb 2024

- Lead developer, driving business analysis and application development
- Main developer for major projects such as HLSmart, CVMeeting, Xuan Loc Logistics, ...
- Worked with Java Servlet, JSP, WebRTC, jQuery, React, Laravel, Flutter, Android and embedded C/C++

30+ projects across diverse business domains**MyRoom**

May 2025 – present

Real-time 3D multiplayer platform for kids (10,000+ daily active users) with Babylon.js 3D client, real-time sync, and scalable AWS infrastructure.

- Built 3D gameplay mechanics with Babylon.js and optimized rendering for stable FPS across devices.
- Implemented real-time synchronization and recovery flows (reconnect/desync) to keep multiplayer state consistent.
- Used Redis caching for fast leaderboards/ranking reads and reduced database load.
- Deployed on AWS with ALB + Auto Scaling (EC2), RDS, S3 + CloudFront, and Secrets Manager. Allow high-traffic handling on marketing campaigns and events.

Tamice / Travity

Nov 2024 – present

B2C travel booking platform integrating many third-party providers; supports 300+ bookings/day with SEO + OLTP-grade transactional workflows.

- Improved SPA SEO and performance using PrerenderIO; reduced page load size from ~100MB to under 5MB with on-demand image resizing, lazy loading and CDN caching.
- Integrated multiple providers (tickets/tours/eSIM/Broadway) with retry/fallback and lifecycle logging, follow saga pattern.
- Implemented Elasticsearch indexing + sync for fast full-text search with filtering and relevance scoring.
- Designed atomic booking flows (payment + provider booking) to handle timeouts without duplicate orders.

SPONGE Ecosystem

Mar 2024 – present

Multi-service platform for franchise operations (internal APIs + admin portals) and centralized review/customer support workflows.

- Built multiple backend services (Spring Boot) and internal APIs for ecosystem and franchise management.
- Delivered admin portals and web apps (React/Next.js) for operations teams with role-based access control.
- Integrated data workflows for multi-channel review management and customer support.
- Massive batch data processing to crawl/sync reviews and customer data across channels.

Lulu Medic Ecosystems

Nov 2025 – present

Healthcare & insurance microservices ecosystem (CMS/PMS/TPA) including claims workflows and partner management.

- Implemented backend services in a microservices architecture with Spring Boot + JPA.
- Worked on claims and policy administration workflows with role-based access considerations.
- Built web UIs with React/Next.js for CMS and operational tooling.
- Deployed and operated services in a Kubernetes-based environment.

Amazon Water Park (Desktop Kiosk/POS)

June 2024 – present

Cross-platform desktop app for kiosks, F&B POS, ticketing and retail with payments + hardware (printers/POS) integrations.

- Built production desktop app using Tauri (Rust) + React, covering booking, checkout, and printing workflows.
- Implemented hardware communication via USB/Serial/Network APIs; supported thermal, ticket and QR printers.
- Integrated payment gateways and credit card POS device APIs for reliable transaction processing.
- Customized Tauri Rust layer to enable low-level device capabilities.

CVMeeting / CVLearning / Call4Meeting Ecosystems

Apr 2020 – Feb 2024

WebRTC-based meeting, e-learning, and consulting platform built on Janus SFU with web + hybrid mobile clients.

- Supported up to 50 participants with screen sharing, breakout rooms, webinar/learning layouts, and appointment queues.
- Implemented recording to IndexedDB, E2EE, and media enhancements (virtual background, audio processing).
- Built integrations with Firebase (Auth/FCM/Analytics), Google APIs (Gmail/Calendar), and VietQR payments.

Other Projects

POS / F&B: TableON POS (React + Tauri + Spring Boot; WebSocket; order state machine; inventory; printing).

Real-time & media: Cast2Web (QR/link screen sharing via WebRTC + Janus SFU), StageSplash (artist booking app with chat + payments).

ERP / logistics & internal tools: Xuan Loc Logistics (ERP with Dijkstra-based routing + fee algorithm; ~500MB–1GB images/day processing), NhiXuanTCN (Electron + React + Laravel; private network storage) and smaller business sites/utilities.

Healthcare: Healmate/Hangbang (clinic listing web + mobile webview app; AWS EC2/RDS/S3).

HR / marketplace: DdokDdok (job search platform Next.js + Spring Boot; AWS EC2/RDS/S3).

IoT / embedded: HLSmart smart home system (devices + server + apps; MQTT/networking; embedded firmware).

Finance: 4Quants (React, Spring Boot, Python; financial data APIs; charting)

Mobile apps: StageSplash (Flutter, Indian Artist Booking App), Horse Racing App (Flutter, HKJC API), plus smaller websites/demos.

Awards
